Table 1: Overall goal of primary studies.

| Primary Study - Goal | Strategy | Procedure |
|---|---|---|
| [PS20] - Evaluate *Code Compose*, an internal AI-assisted coding system at Meta | Field Study | Survey (Open Ended feedback) |
| [PS25] - Case study of developing a business app through SDLC phases using systematic prompting | Experimental Simulation | Case study, Concept Implementation (Proof of Concept) |
| [PS27] - Evaluate an LLM-based tool for generating Ansible YAML code | Field Study | Survey |
| [PS9] - Compare novice coding with and without Copilot in terms of performance and experience | Laboratory Experiment | Controlled experiment, Survey |
| [PS4] - Compare AI-pair and non-AI-pair projects in a mobile game studio | Field Study | Case study, Survey, Interviews |
| [PS6] - Investigates perceived productivity of GenAI integration in software development | Field Study | Case Study, Survey |
| [PS21] - Evaluates an IDE-integrated, prompt-less conversational LLM | Laboratory Experiment | Controlled experiment: Within-subject, Survey |
| [PS3] - Investigate the impact of GenAI on labor productivity across domains | Sample Study | Survey |
| [PS2] - Modeling productivity and output quality of 70 large global companies using AI tools | Sample Study | Survey, Interview, Case Study |
| [PS28] - Measuring GitHub Copilot's impact on developer productivity for an automotive organization | Field Study | Case Study, Survey |
| [PS10] - Evaluate the benefits of using IDE autocompletion | Laboratory Experiment | Controlled experiment: Between-subjects, Survey |
| [PS35] - Evaluate developers' performance with neural code translation | Laboratory Experiment | Case Study, Controlled experiment: Within-subjects, Survey |
| [PS36] - Investigate if code generation in PyCharm improves productivity | Laboratory Experiment | Controlled experiment, Survey, Concept Implementation |
| [PS33] - Whether working with ChatGPT was helpful in coding and development tasks | Laboratory Experiment | Controlled experiment: Between-groups, Survey |
| [PS34] - Explore how LLM-assistants impact productivity using the SPACE framework | Laboratory Experiment | Controlled experiment: Within-subjects, Survey |
| [PS23] - Understand how access to Google Bard affects productivity and trust in coding | Laboratory Experiment | Controlled experiment: Within-subjects, Survey |
| [PS13] - Gain insights into programmers' views on ChatGPT and other AI tools | Experimental Simulation | Survey |
| [PS16] - Compare performance of Stack Overflow vs. ChatGPT usage | Laboratory Experiment | Controlled experiment: Between-groups, Survey |
| [PS32] - Compare highlighting conditions for AI code completion | Laboratory Experiment | Controlled experiment: Within-subjects, Survey, Interview |
| [PS7] - Explore how professional developers perceive AI-based tools in their work | Field Study | Case Studies, Surveys |
| [PS14] - Comparing human-human vs. human-agent interaction using wizard-of-Oz | Laboratory Experiment | User Study, Interview, Survey |
| [PS5] - Compare novices' performance using ChatGPT vs. web search | Laboratory Experiment | Controlled experiment, Survey |
| [PS18] - How LLMs affect students' learning and practice of software testing | Laboratory Experiment | Controlled experiment: Between-subjects, Survey |

| Primary Study - Goal | Strategy | Procedure |
|---|---|---|
| [PS17] - Understand developers' daily and continuous experiences with AI code assistants | Field Study | Interview |
| [PS15] - Understand developers' practices with AI tools to identify its benefits and challenges | Sample Study | Survey |
| [PS8] - Explore interaction patterns and challenges of using an AI tutor for students | Field Experiment | Concept Implementation, Surveys |
| [PS11] - Practical usefulness of ChatGPT for professional software engineers | Field Study | Observational Study, Survey |
| [PS22] - Initial experiences using a RAG-based coding LLM-assistant | Laboratory Experiment | User Study, Survey |
| [PS12] - Expert opinions on future GenAI impact on labor market | Judgment Study | Delphi Study, Interviews, Surveys |
| [PS26] - What influences engineers to adopt GenAI tools | Sample Study | Surveys |
| [PS37] - GitHub Copilot usage and self-reported productivity | Sample Study | Case Study, Survey |
| [PS19] - Understand how programmers interact with GitHub Copilot | Experimental Simulation | User Study, Survey |
| [PS30] - Prevent unhelpful prompts that affect software productivity | Laboratory Experiment | Concept Implementation (Proof of Concept) |
| [PS29] - Explore the role of bots on software development productivity | Formal Theory | - |
| [PS31] - Future of AI agents and programmers | Opinion Paper | - |
| [PS24] - Futuristic scenario on AI's impact on developers (2024–2030) | Opinion Paper | - |
| [PS1] - Roadmap of how AI reshapes software engineering | Formal Theory | - |

Table 2: Study distribution across investigated *SPACE* dimension combinations.

| **SPACE Dimensions** | **Studies** |
|---|---|
| Satisfaction | [PS7] |
| Performance | [PS3] |
| Communication | [PS1] |
| Activity + Efficiency | [PS10] |
| Performance + Activity | [PS30] |
| Performance + Efficiency | [PS2, PS12, PS25] |
| Satisfaction + Communication | [PS6, PS8, PS11] |
| Satisfaction + Efficiency | [PS15, PS17, PS22, PS26] |
| Satisfaction + Performance | [PS9, PS13, PS32, PS35] |
| Performance + Communication + Efficiency | [PS29] |
| Satisfaction + Activity + Efficiency | [PS27] |
| Satisfaction + Performance + Communication | [PS24] |
| Satisfaction + Communication + Efficiency | [PS21, PS31] |
| Satisfaction + Performance + Activity | [PS5, PS18, PS20] |
| Satisfaction + Performance + Efficiency | [PS4, PS16, PS23, PS33, PS36] |
| Satisfaction + Performance + Communication + Efficiency | [PS14] |
| All dimensions | [PS19, PS28, PS34, PS37] |
